# CONTENTS

- I. OBJECTIVES OF THE PROGRAMME
  - a) Programme goal
  - b) Programme objective
- II. ELIGIBILITY CRITERIA FOR ADMISSION
- III. TEACHING AND TRAINING ACTIVITIES
- IV. SYLLABUS
- V. COMPETENCIES
- VI. THESIS & THESIS PROTOCOL
- VII. LOG BOOK
- VIII. NBE LEAVE GUIDELINES
- IX. EXAMINATION –
  - a) FORMATIVE ASSESSMENT
  - b) FINAL THEORY & PRACTICAL
- X. RECOMMENDED TEXT BOOKS AND JOURNALS

## **PROGRAMME GOAL**

To provide uniform, standard training in Dermatology, Venereology and Leprosy to the candidates so that after 3 years of training they are able to acquire the necessary competencies in the specialty to work as Senior Resident/ Junior Consultant

## **PROGRAMME OBJECTIVES**

The students after the training should be able to:

- Provide quality patient care
- Able to perform Clinical examination & relevant laboratory investigations
- Adopt a compassionate attitude towards the patient (and their families) under his/her charge
- Describe preventive measures at individual and community levels against communicable Skin, Leprosy and Venereal diseases
- Manage independently and efficiently all medical emergencies related with skin, leprosy and venereal disease
- Describe the current treatment modalities and awareness of latest treatment of various diseases of skin, STD and leprosy.
- Teach the medical and Paramedical students in the specialties
- Conduct research in the field of Skin, Venereal diseases & Leprosy
- Describe the preventive aspects, education, counseling services to the patient and National Control Program of India for Leprosy, STDs and HIV infections.

## ELIGIBILITY CRITERIA FOR ADMISSIONS TO THE PROGRAMME

### (A) DNB Dermatology , Venereology and Leprosy Course:

1. Any medical graduate with **MBBS** qualification, who has qualified the **Entrance Examination** conducted by NBE and fulfill the eligibility criteria for admission to DNB **Broad Specialty** courses at various NBE accredited Medical Colleges/ institutions/Hospitals in India is eligible to participate in the Centralized counseling for allocation of DNB **Dermatology and Venereology** seats purely on merit cum choice basis.
2. Admission to 3 years post MBBS DNB **Dermatology and Venereology** course is only through **Entrance Examination** conducted by NBE and Centralized Merit Based Counseling conducted by National Board of Examination as per prescribed guidelines.

### (B) DNB (Post diploma) Dermatology and Venereology Course:

1. Any medical graduate with MBBS qualification who has successfully completed **DVD** (and fulfill the eligibility criteria for admission to DNB (Post Diploma) Broad Specialty courses at various NBE accredited Medical Colleges/ institutions/Hospitals in India is eligible to participate in the Centralized counseling for allocation of DNB (Post Diploma) **Dermatology and Venereology** seats purely on merit cum choice basis.
2. Admission to 2 years post diploma DNB **Dermatology and Venereology** course is only through PD CET Centralized Merit Based Counseling conducted by National Board of Examination as per prescribed guidelines.

### Duration of Course:

**For Primary candidates : 3 years**  
**For Secondary Candidates : 2 years**

Every candidate admitted to the training programme shall pursue a regular course of study (on whole time basis) in the concerned recognized institution under the guidance of recognized post graduate teacher for assigned period of the course.

## TEACHING AND TRAINING ACTIVITIES

The fundamental components of the teaching programme should include:

1. Case presentations (long & spot cases) & discussion- once a week
2. Seminar – Once a week
3. Journal club- Once a week
4. Ward round presentation
5. Faculty lecture teaching- once a month
6. Clinicopathological conference – once a week
7. Clinical Audit-Once a Month
8. A poster and have one oral presentation at least once during their training period in a recognized conference.

The rounds should include bedside sessions, file rounds & documentation of case history and examination, progress notes, round discussions, investigations and management plan) interesting and difficult case unit discussions.

The training program would focus on knowledge, skills and attitudes (behavior), all essential components of education. It is being divided into theoretical, clinical and practical in all aspects of the delivery of the rehabilitative care, including methodology of research and teaching.

**Theoretical:** The theoretical knowledge would be imparted to the candidates through discussions, journal clubs, symposia and seminars. The students are exposed to recent advances through discussions in journal clubs. These are considered necessary in view of an inadequate exposure to the subject in the undergraduate curriculum.

**Symposia:** Trainees should be encouraged to present symposia based on the curriculum in a period of three years to the combined class of teachers and students. A free discussion would be encouraged in these symposia. The topics of the symposia would be given to the trainees with the dates for presentation.

**Clinical:** The trainee would be attached to a faculty/senior resident to be able to pick up methods of history taking, examination, prescription writing and management and rehabilitation practice.

# SYLLABUS

## ANATOMY AND ORGANIZATION OF HUMAN SKIN

<b><i>Must know</i></b>	<b><i>Should know</i></b>	<b><i>Good to know</i></b>
<ul style="list-style-type: none"> <li>• Components of normal human skin</li> <li>• Epidermis</li> <li>• Dermoepidermal Junctional</li> <li>• Dermis</li> <li>• Langerhan's cells</li> <li>• Mast cells</li> </ul>	<ul style="list-style-type: none"> <li>• Nerves and sense organs</li> <li>• Merkel cells</li> <li>• Basophils</li> <li>• Blood vessels</li> <li>• Lymphatic systems</li> </ul>	<ul style="list-style-type: none"> <li>• Embryology</li> <li>• Regional variation of lymphatic</li> </ul>

## FUNCTION OF THE SKIN

<b>Must know</b>	<b>Should know</b>	<b>Good to know</b>
<ul style="list-style-type: none"> <li>• Barrier functions</li> <li>• Temperature regulation</li> <li>• Skin Failure</li> <li>• Immunological function</li> </ul>	<ul style="list-style-type: none"> <li>• Mechanical function</li> <li>• Sensory and autonomic function</li> </ul>	<ul style="list-style-type: none"> <li>• Bioengineering and the skin</li> <li>• Socio sexual communication</li> </ul>

## DIAGNOSIS OF SKIN DISEASE

<b>Must know</b>	<b>Should know</b>	<b>Good to know</b>
<ul style="list-style-type: none"> <li>• Fundamental of diagnosis</li> <li>• Disease definition</li> <li>• The history</li> <li>• Examination of the skin</li> <li>• Additional clinical investigation (Diascopy , Wood's light, F.N.A.C. of lymph nodes etc.)</li> <li>• Skin testing</li> </ul>	<ul style="list-style-type: none"> <li>• Radiological and imaging</li> <li>• Commonly used laboratory tests examination</li> </ul>	<ul style="list-style-type: none"> <li>• Oral provocation test</li> </ul>

## EPIDEMIOLOGY OF SKIN DISEASE

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>• What is epidemiology and why is it relevant to dermatology</li> <li>• Describing the natural history and association of specific skin disease</li> </ul>	<ul style="list-style-type: none"> <li>• How much of public health problem is skin disease</li> <li>• What determines the frequency of skin disease</li> </ul>	

## HISTOPATHOLOGY OF THE SKIN GENERAL PRINCIPLES

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>• Biopsy of the skin</li> <li>• Laboratory methods</li> </ul>	<ul style="list-style-type: none"> <li>• Artefacts</li> <li>• The approach to microscopic examination of tissue sections</li> </ul>	

## MOLECULAR BIOLOGY

Must know	Should know	Good to know
	<ul style="list-style-type: none"> <li>• Basic Molecular biology of the cell</li> <li>• Molecular techniques</li> <li>• Cancer genetics</li> <li>• Complex traits</li> </ul>	<ul style="list-style-type: none"> <li>• Strategies for identification of disease causing genes</li> <li>• Future strategies</li> </ul>

## INFLAMMATION

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>• Characteristics of inflammation</li> <li>• Phases of inflammation</li> <li>• Innate defence mechanisms</li> <li>• Apoptosis</li> <li>• Major histocompatibility</li> </ul>	<ul style="list-style-type: none"> <li>• Vasculature and inflammation</li> <li>• Mediators of inflammation</li> </ul>	

complex		
---------	--	--

### CLINICAL IMMUNOLOGY, ALLERGY AND PHOTO IMMUNOLOGY

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>Innate immunity</li> <li>Acquired immunity</li> <li>Photo immunology</li> <li>Overview of structure and function of immune system</li> </ul>	<ul style="list-style-type: none"> <li>Overview of immunological disease</li> </ul>	<ul style="list-style-type: none"> <li>Overview of diagnostic testing for immunological and allergic disease</li> </ul>

### WOUND HEALING

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>Clinical aspects of wound healing</li> </ul>	<ul style="list-style-type: none"> <li>Biological aspects of wound healing</li> </ul>	

### GENETICS AND GENODERMATOSES

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>Genetics and disorders of the skin</li> <li>Histocompatibility antigens and disease association</li> <li>Chromosomal disorders – down's syndrome, trisomy 18, trisomy 13 (clinical features, diagnosis, management)</li> <li>Ectodermal dysplasias <ul style="list-style-type: none"> <li>Hypohidrotic ED – definition, etiology, clinical features, diagnosis, treatment</li> <li>EEC syndrome</li> <li>Hidrotic ED</li> <li>Rapp Hodgkin syndrome</li> </ul> </li> <li>Syndromes associated with DNA instability <ul style="list-style-type: none"> <li>Xeroderma pigmentosa –</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Nosology of genetics in skin disease</li> <li>Principles of medical genetics</li> <li>Genetic counseling</li> <li>Poikilodermatous syndromes : dyskeratosis congenital, rothmund Thompson syndrome</li> <li>Gardner syndrome</li> <li>Cowden syndrome</li> </ul>	<ul style="list-style-type: none"> <li>Miscellaneous syndromes</li> <li>Focal dermal hypoplasia</li> <li>Nail patella syndrome</li> <li>Pachydermoperiostosis</li> </ul>

definition, etiology, clinical features, diagnosis, treatment <ul style="list-style-type: none"> <li>○ Bloom's syndrome</li> <li>○ Cockayne's syndrome</li> <li>● Sex chromosomal defects – turner's, klinefelter's, noonan syndrome</li> <li>○ Familial multiple tumour syndromes – neurofibromatosis syndrome 1,2 – (definition, etiology, clinical features, treatment)</li> <li>○ Tuberous sclerosis complex</li> </ul>		
---	--	--

### PRENATAL DIAGNOSIS OF GENETIC SKIN DISEASE

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>● Methods in prenatal diagnosis</li> <li>● Complication of fetal skin biopsy</li> <li>● Ethical aspects of prenatal diagnosis</li> <li>● Current indications for fetal skin biopsy</li> </ul>	<ul style="list-style-type: none"> <li>● DNA techniques</li> <li>● Preimplantation genetic diagnosis</li> </ul>	<ul style="list-style-type: none"> <li>●</li> </ul>

### THE NEONATE

Must know	Should know	Good to know
<ul style="list-style-type: none"> <li>● Skin disorders in the neonate</li> <li>● Collodion baby</li> <li>● Eczematous eruption in the newborn</li> <li>● Infantile psoriasis and napkin psoriasis</li> </ul>	<ul style="list-style-type: none"> <li>● Disorders caused by transplacental transfer of maternal autoantibody</li> <li>● Blueberry muffin baby</li> <li>● Disorders caused by transfer of toxic</li> <li>● Acute hemorrhagic oedema of childhood</li> </ul>	<ul style="list-style-type: none"> <li>● Substances in maternal milk</li> <li>● Neonatal purpura fulminans</li> </ul>

	<ul style="list-style-type: none"> <li>• Infections</li> <li>• Primary immunodeficiency disorders</li> <li>• Disorders of subcutaneous fat</li> </ul>	
--	---	--

## NAEVI AND OTHER DEVELOPMENTAL DEFECTS

MUST KNOW	SHOULD KNOW	GOOD TO KNOW
<ul style="list-style-type: none"> <li>• Definitions <ul style="list-style-type: none"> <li>○ Etiology</li> <li>○ Classification</li> </ul> </li> <li>• Epidermal naevi <ul style="list-style-type: none"> <li>○ Keratinocyte naevi</li> <li>○ VEN</li> <li>○ ILVEN</li> <li>○ Follicular naevi</li> <li>○ Comedonaevus</li> <li>○ Nevus sebaceous</li> <li>○ Epidermal naevus syndrome</li> </ul> </li> <li>• Vascular naevi <ul style="list-style-type: none"> <li>○ Infantile hemangioma</li> <li>○ Kasabach merritt syndrome</li> </ul> </li> <li>• Vascular malformations <ul style="list-style-type: none"> <li>• Capillary <ul style="list-style-type: none"> <li>○ Salmon patch</li> <li>○ Portwine stain</li> <li>○ Naevusanemicus</li> <li>○ Sturge weber syndrome</li> </ul> </li> <li>• Mixed vascular</li> <li>• Klippel treauny</li> <li>• Parkas weber syndrome</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Linear porokeratosis</li> <li>• Apocrine naevus</li> <li>• Eccrine naevus</li> <li>• Dermal and subcutaneous naevi</li> <li>• Eruptive collagenoma</li> <li>• Shagreen patch</li> <li>• Knuckle pads</li> <li>• Pseudoxanthom a elasticum</li> <li>• Proteus syndrome</li> <li>• Zosteriform venous malformation</li> </ul>	<ul style="list-style-type: none"> <li>• Branchial cyst</li> <li>• Branchial sinu s and fistul a</li> </ul>

<ul style="list-style-type: none"> <li>• Cutis marmorata telangiectatica <ul style="list-style-type: none"> <li>○ Angiokeratomas</li> </ul> </li> <li>• Angiokeratoma circumscriptum</li> <li>• Angiokeratoma of Mibelli</li> <li>• Solitary papular</li> <li>• Angiokeratoma of scrotum</li> <li>• Preauricular cyst and sinus</li> <li>• Aplasia cutis congenita</li> </ul>		
---	--	--

## PRURITUS

<ul style="list-style-type: none"> <li>• <b>Classification</b></li> <li>• Measurement</li> <li>• Pathophysiology</li> <li>• Central itch</li> <li>• Factors modulating itching</li> <li>• Scratching</li> <li>• Itching in non-inflamed skin</li> <li>• Itching in disease states</li> <li>• Aquagenic pruritus</li> <li>• Psychogenic pruritus</li> <li>• Postmenopausal pruritus</li> <li>• Pruritus of atopic eczema</li> <li>• Acquired immune deficiency syndrome</li> <li>• <b>Investigation of generalized pruritus</b></li> <li>• Management of itching</li> </ul>	<ul style="list-style-type: none"> <li>• Important miscellaneous causes of intense itching</li> </ul>

**Biostatistics, Research Methodology and Clinical Epidemiology**

**Ethics**

**Medico legal aspects relevant to the discipline**

**Health Policy issues as may be applicable to the discipline**

## POSTING SCHEDULE

Place	DURATION
<b>CLINICS 9AM-1PM DAILY (MON-SATURDAY)</b>	
1. WARD	6 MONTHS
2. STD CLINIC	6 MONTHS
3. LEPROSY CLINIC	3 MONTHS
4. MINOR OT	3 MONTHS
5. OPD	18 MONTHS
 <b>SPECIAL CLINICS (ONCE A WEEK): EVENING 2-4PM</b>	
1. VITILIGO CLINIC	3 MONTHS
2. PSORIASIS CLINIC	3 MONTHS
3. VESICO BULLOUS CLINIC	3 MONTHS
4. PIGMENTARY CLINIC	3 MONTHS
5. PSORIASIS CLINIC	3 MONTHS
6. DERMATOSURGERY	3 MONTHS
7. PHOTOTHERAPY	3 MONTHS
8. COSMETOLOGY (PEELS, FILLERS ETC.)	3 MONTHS

## **SKILLS**

1. Clinical skills
2. Bed side diagnostic skills
3. Dermatopathology skills
4. Dermatosurgery skills

### ***Clinical skills***

- Take detailed and reliable history and record appropriate details
- Demonstrate detailed and correct physical examination, including skin & appendages, mucous membranes, and other relevant body systems
- Formulate accurate, complete and appropriate differential diagnosis
- Select appropriate investigations for diagnosis
- Select appropriate treatment plan
- Communicate treatment plan to the patient and/or relatives or care-takers
- Recognize potentially serious skin diseases
- Recognize urgency of patients requiring immediate assessment and treatment, and differentiate from non-urgent cases
- Recognize own limits and choose appropriately when to ask for help.

### ***Dermatopathology skills***

- Recognize importance of histopathology in appropriate cases
- Regularly review biopsy specimens with histopathologist
- Evaluate histological skin slides, giving appropriate differential diagnosis
- Discuss appropriate differential diagnosis with histopathology team
- Interpret special stains/immunohistochemistry correctly
- Participate actively in departmental clinicopathological review

### ***Bed side diagnostic skills***

Perform and interpret the following tests/diagnostic procedures:

- KOH smear examination
- Tzanck test
- Gram staining

- Giemsa staining
- Zeil-Neilson staining for acid fast bacilli (AFB)
- Dark ground illumination (DGI) microscopy for treponemes
- Wood's lamp examination

### ***Dermatosurgery skills***

- Accurately evaluate surgical options for individual skin lesions
- Perform the following surgical procedures safely and effectively:
  1. Biopsies – skin, nail, and nerve
  2. Cryotherapy
  3. Curettage with and without cautery
  4. Shave excision
  5. Wound closure using different suturing techniques
  6. Chemical peeling
- Observe the following with proper understanding of the procedure:
  1. Patch testing
  2. Phototherapy (PUVA and NB-UVB)
  3. Dermabrasion
  4. Nail surgery
  5. Split thickness grafting
  6. LASER
- Identify complications of skin surgery, including medico-legal aspects
- Participate in surgical audit
- Recognize limits of own surgical skills, and consult with plastic surgeon appropriately

## THESIS PROTOCOL & THESIS

The candidates are required to submit a thesis at the end of three years of training as per the rules and regulations of NBE.

### **Guidelines for Submission of Thesis Protocol & Thesis by candidates**

Research shall form an integral part of the education programme of all candidates registered for DNB degrees of NBE. The Basic aim of requiring the candidates to write a thesis protocol & thesis/dissertation is to familiarize him/her with research methodology. The members of the faculty guiding the thesis/dissertation work for the candidate shall ensure that the subject matter selected for the thesis/dissertation is **feasible**, **economical** and **original**.

### **Guidelines for Thesis Protocol**

The protocol for a research proposal (including thesis) is a study plan, designed to describe the background, research question, aim and objectives, and detailed methodology of the study. In other words, the protocol is the 'operating manual' to refer to while conducting a particular study.

The candidate should refer to the NBE Guidelines for preparation and submission of Thesis Protocol before the writing phase commences. The minimum writing requirements are that the language should be clear, concise, precise and consistent without excessive adjectives or adverbs and long sentences. There should not be any redundancy in the presentation.

The development or preparation of the Thesis Protocol by the candidate will help her/him in understanding the ongoing activities in the proposed area of research. Further it helps in creating practical exposure to research and hence it bridges the connectivity between clinical practice and biomedical research. Such research exposure will be helpful in improving problem solving capacity, getting updated with ongoing research and implementing these findings in clinical practice.

Research Ethics: Ethical conduct during the conduct and publication of research is an essential requirement for all candidates and guides, with the primary responsibility of ensuring such conduct being on the thesis guide. Issues like Plagiarism, not maintaining the confidentiality of data, or any other distortion of the research process will be viewed seriously. The readers may refer to standard documents for the purpose.

The NBE reserves the right to check the submitted protocol for plagiarism, and will reject those having substantial duplication with published literature.

## PROTOCOL REQUIREMENTS

1. All of the following will have to be entered in the online template. The thesis protocol should be restricted to the following word limits.
  - Title : 120 characters (with spacing) page
  - Synopsis [structured] : 250-300
  - Introduction : 300-500
  - Review of literature : 800-1000
  - Aim and Objectives : Up to 200
  - Material and Methods : 1200-1600
  - 10-25 References [ICMJE style]
2. It is mandatory to have ethics committee approval before initiation of the research work. The researcher should submit an appropriate application to the ethics committee in the prescribed format of the ethics committee concerned.

## Guidelines for Thesis

1. The proposed study must be approved by the institutional ethics committee and the protocol of thesis should have been approved by NBE.
2. The thesis should be restricted to the size of 80 pages (maximum). This includes the text, figures, references, annexures, and certificates etc. It should be printed on both sides of the paper; and every page has to be numbered. Do not leave any page blank. To achieve this, following points may be kept in view:
  - a. The thesis should be typed in 1.5 space using Times New Roman/Arial/Garamond size 12 font, 1" margins should be left on all four sides. Major sections viz., Introduction, Review of Literature, Aim & Objectives, Material and Methods, Results, Discussion, References, and Appendices should start from a new page. Study proforma (Case record form), informed consent form, and patient information sheet may be printed in single space.
  - b. Only contemporary and relevant literature may be reviewed. Restrict the introduction to 2 pages, Review of literature to 10-12 pages, and Discussion to 8-10 pages.
  - c. The techniques may not be described in detail unless any modification/innovations of the standard techniques are used and reference(s) may be given.
  - d. Illustrative material may be restricted. It should be printed on paper only. There is no need to paste photographs separately.

3. Since most of the difficulties faced by the residents relate to the work in clinical subject or clinically-oriented laboratory subjects, the following steps are suggested:
  - a. The number of cases should be such that adequate material, judged from the hospital attendance/records, will be available and the candidate will be able to collect case material within the period of data collection, i.e., around 6-12 months so that he/she is in a position to complete the work within the stipulated time.
  - b. The aim and objectives of the study should be well defined.
  - c. As far as possible, only clinical/laboratory data of investigations of patients or such other material easily accessible in the existing facilities should be used for the study.
  - d. Technical assistance, wherever necessary, may be provided by the department concerned. The resident of one specialty taking up some problem related to some other specialty should have some basic knowledge about the subject and he/she should be able to perform the investigations independently, wherever some specialized laboratory investigations are required a co-guide may be co-opted from the concerned investigative department, the quantum of laboratory work to be carried out by the candidate should be decided by the guide & co-guide by mutual consultation.
4. The clinical residents are not ordinarily expected to undertake experimental work or clinical work involving new techniques, not hitherto perfected OR the use of chemicals or radioisotopes not readily available. They should; however, be free to enlarge the scope of their studies or undertake experimental work on their own initiative but all such studies should be feasible within the existing facilities.
5. The DNB residents should be able to freely use the surgical pathology/autopsy data if it is restricted to diagnosis only, if however, detailed historic data are required the resident will have to study the cases himself with the help of the guide/co-guide. The same will apply in case of clinical data.
6. Statistical methods used for analysis should be described specifically for each objective, and name of the statistical program used mentioned.

### **General Layout of a DNB Thesis:**

- **Title-** A good title should be brief, clear, and focus on the central theme of the topic; it should avoid abbreviations. The Title should effectively summarize the proposed research and should contain the PICO elements.
- **Introduction-** It should be focused on the research question and should be directly relevant to the objectives of your study.
- **Review of Literature** - The Review should include a description of the most relevant and recent studies published on the subject.

- Aim and Objectives - The 'Aim' refers to what would be broadly achieved by this study or how this study would address a bigger question / issue. The 'Objectives' of the research stem from the research question formulated and should at least include participants, intervention, evaluation, design.
- **Material and Methods-** This section should include the following 10 elements: Study setting (area), Study duration; Study design (descriptive, case-control, cohort, diagnostic accuracy, experimental (randomized/non-randomized)); Study sample (inclusion/exclusion criteria, method of selection), Intervention, if any, Data collection, Outcome measures (primary and secondary), Sample size, Data management and Statistical analysis, and Ethical issues (Ethical clearance, Informed consent, trial registration).
- **Results-** Results should be organized in readily identifiable sections having correct analysis of data and presented in appropriate charts, tables, graphs and diagram etc.
- **Discussion**—It should start by summarizing the results for primary and secondary objectives in text form (without giving data). This should be followed by a comparison of your results on the outcome variables (both primary and secondary) with those of earlier research studies.
- **Summary and Conclusion-** This should be a précis of the findings of the thesis, arranged in four paragraphs: (a) background and objectives; (b) methods; (c) results; and (d) conclusions. The conclusions should strictly pertain to the findings of the thesis and not outside its domain.
- **References-** Relevant References should be cited in the text of the protocol (in superscripts).
- **Appendices** -The tools used for data collection such as questionnaire, interview schedules, observation checklists, informed consent form (ICF), and participant information sheet (PIS) should be attached as appendices. Do not attach the master chart.

### Thesis Protocol Submission to NBE

1. DNB candidates are required to submit their thesis protocol within 90 days of their joining DNB training.
2. Enclosures to be submitted along with protocol submission form:
  - a) Form for Thesis Protocol Submission properly filled.
  - b) Thesis Protocol duly signed.
  - c) Approval letter of institutional Ethical committee. (*Mandatory, non receivable of any one is liable for rejection*)

## **Thesis Submission to NBE**

1. As per NBE norms, writing a thesis is essential for all DNB candidates towards partial fulfillment of eligibility for award of DNB degree.
2. DNB candidates are required to submit the thesis before the cut-off date which shall be 30th June of the same year for candidates appearing for their scheduled December final theory examination. Similarly, candidates who are appearing in their scheduled June DNB final examination shall be required to submit their thesis by 31st December of preceding year.
3. Candidates who fail to submit their thesis by the prescribed cutoff date shall NOT be allowed to appear in DNB final examination.
4. Fee to be submitted for assessment (In INR): 3500/-
5. Fee can be deposited ONLY through pay-in-slip/challan at any of the Indian bank branch across India. The challan can be downloaded from NBE website [www.natboard.edu.in](http://www.natboard.edu.in)
6. Thesis should be bound and the front cover page should be printed in the standard format. A bound thesis should be accompanied with:
  - a. A Synopsis of thesis.
  - b. Form for submission of thesis, duly completed
  - c. NBE copy of challan (in original) towards payment of fee as may be applicable.
  - d. Soft copy of thesis in a CD duly labeled.
  - e. Copy of letter of registration with NBE.
7. A declaration of thesis work being bonafide in nature and done by the candidate himself/herself at the institute of DNB training need to be submitted bound with thesis. It must be signed by the candidate himself/herself, the thesis guide and head of the institution, failing which thesis shall not be considered.

***The detailed guidelines and forms for submission of Thesis Protocol & Thesis are available at [www.natboard.edu.in.thesis.php](http://www.natboard.edu.in.thesis.php).***

## LOG BOOK

A candidate shall maintain a log book of operations (assisted / performed) during the training period, certified by the concerned post graduate teacher / Head of the department / senior consultant.

This log book shall be made available to the board of examiners for their perusal at the time of the final examination.

The log book should show evidence that the before mentioned subjects were covered (with dates and the name of teacher(s)) The candidate will maintain the record of all academic activities undertaken by him/her in log book .

1. Personal profile of the candidate
2. Educational qualification/Professional data
3. Record of case histories
4. Procedures learnt
5. Record of case Demonstration/Presentations
6. Every candidate, at the time of practical examination, will be required to produce performance record (log book) containing details of the work done by him/her during the entire period of training as per requirements of the log book. It should be duly certified by the supervisor as work done by the candidate and countersigned by the administrative Head of the Institution.
7. In the absence of production of log book, the result will not be declared.

## Leave Rules

1. DNB Trainees are entitled to leave during the course of DNB training as per the Leave Rules prescribed by NBE.
2. A DNB candidate can avail a maximum of 20 days of leave in a year excluding regular duty off/ Gazetted holidays as per hospital/institute calendar/policy.
3. MATERNITYLEAVE:
  - a. A female candidate is permitted a maternity leave of 90 days once during the entire duration of DNB course.
  - b. The expected date of delivery (EDD) should fall within the duration of maternity leave.
  - c. Extension of maternity leave is permissible only for genuine medical reasons and after prior approval of NBE. The supporting medical documents have to be certified by the Head of the Institute/hospital where the candidate is undergoing DNB training. NBE reserves its rights to take a final decision in such matters.
  - d. The training of the candidate shall be extended accordingly in case of any extension of maternity leave being granted to the candidate.
  - e. Candidate shall be paid stipend during the period of maternity leave. No stipend shall be paid for the period of extension of leave.
4. Male DNB candidates are entitled for paternity leave of maximum of one week during the entire period of DNB training.
5. No kind of study leave is permissible to DNB candidates. However, candidates may be allowed an academic leave as under across the entire duration of training program to attend the conferences/CMEs/Academic programs/Examination purposes.

<b>DNB COURSE</b>	<b>NO. OF ACADEMIC LEAVE</b>
DNB 3 years Course (Broad & Super Specialty)	14 Days
DNB 2 years Course (Post Diploma)	10 Days
DNB Direct 6 years Course	28 days

6. Under normal circumstances leave of one year should not be carried forward to the next year. However, in exceptional cases such as prolonged illness the leave

across the DNB training program may be clubbed together with prior approval of NBE.

7. Any other leave which is beyond the above stated leave is not permissible and shall lead to extension/cancellation of DNB course.
8. Any extension of DNB training for more than 2 months beyond the scheduled completion date of training is permissible only under extra-ordinary circumstances with prior approval of NBE. Such extension is neither automatic nor shall be granted as a matter of routine. NBE shall consider such requests on merit provided the seat is not carried over and compromise with training of existing trainees in the Department.
9. Unauthorized absence from DNB training for more than 7 days may lead to cancellation of registration and discontinuation of the DNB training and rejoining shall not be permitted.

#### 10. Medical Leave

- a. Leave on medical grounds is permissible only for genuine medical reasons and NBE should be informed by the concerned institute/hospital about the same immediately after the candidate proceeds on leave on medical grounds.
- b. The supporting medical documents have to be certified by the Head of the Institute/hospital where the candidate is undergoing DNB training and have to be sent to NBE.
- c. The medical treatment should be taken from the institute/ hospital where the candidate is undergoing DNB training. Any deviation from this shall be supported with valid grounds and documentation.
- d. In case of medical treatment being sought from some other institute/hospital, the medical documents have to be certified by the Head of the institute/hospital where the candidate is undergoing DNB training.
- e. NBE reserves its rights to verify the authenticity of the documents furnished by the candidate and the institute/hospital regarding Medical illness of the candidate and to take a final decision in such matters.

11.

- a. Total leave period which can be availed by DNB candidates is  $120+28 = 148$  days for 6 years course,  $60+14=74$  days for 3 years course and  $40+10 = 50$  days for 2 years course. This includes all kinds of eligible leave including academic leave. Maternity / Paternity leave can be availed separately by eligible candidates. Any kind of leave including medical leave exceeding the aforementioned limit shall lead to extension of DNB training. It is clarified that prior approval of NBE is necessary for availing any such leave.
- b. The eligibility for DNB Final Examination shall be determined strictly in accordance with the criteria prescribed in the respective information bulletin.

# EXAMINATION

## FORMATIVE ASSESSMENT

Formative assessment includes various formal and informal assessment procedures by which evaluation of student's learning, comprehension, and academic progress is done by the teachers/ faculty to improve student attainment. Formative assessment test (FAT) is called as "Formative" as it informs the in process teaching and learning modifications. FAT is an integral part of the effective teaching. The goal of the FAT is to collect information which can be used to improve the student learning process.

Formative assessment is essentially positive in intent, directed towards promoting learning; it is therefore part of teaching. Validity and usefulness are paramount in formative assessment and should take precedence over concerns for reliability. The assessment scheme consists of Three Parts which has to be essentially completed by the candidates.

The scheme includes:-

Part I:- Conduction of theory examination

Part-II :- Feedback session on the theory performance

Part-III :- Work place based clinical assessment

### Scheme of Formative assessment

<b>PART – I</b>	<b>CONDUCT OF THEORY EXAMINATION</b>	Candidate has to appear for Theory Exam and it will be held for One day.
<b>PART – II</b>	<b>FEEDBACK SESSION ON THE THEORY PERFORMANCE</b>	Candidate has to appear for his/her Theory Exam Assessment Workshop.
<b>PART – III</b>	<b>WORK PLACE BASED CLINICAL ASSESSMENT</b>	After Theory Examination, Candidate has to appear for Clinical Assessment.

The performance of the resident during the training period should be monitored throughout the course and duly recorded in the log books as evidence of the ability and daily work of the student

### 1. Personal attributes:

- **Behavior and Emotional Stability:** Dependable, disciplined, dedicated, stable in emergency situations, shows positive approach.
- **Motivation and Initiative:** Takes on responsibility, innovative, enterprising, does not shirk duties or leave any work pending.
- **Honesty and Integrity:** Truthful, admits mistakes, does not cook up information, has ethical conduct, exhibits good moral values, loyal to the institution.

- **Interpersonal Skills and Leadership Quality:** Has compassionate attitude towards patients and attendants, gets on well with colleagues and paramedical staff, is respectful to seniors, has good communication skills.

## 2. Clinical Work:

- **Availability:** Punctual, available continuously on duty, responds promptly on calls and takes proper permission for leave.
- **Diligence:** Dedicated, hardworking, does not shirk duties, leaves no work pending, does not sit idle, competent in clinical case work up and management.
- **Academic ability:** Intelligent, shows sound knowledge and skills, participates adequately in academic activities, and performs well in oral presentation and departmental tests.
- **Clinical Performance:** Proficient in clinical presentations and case discussion during rounds and OPD work up. Preparing Documents of the case history/examination and progress notes in the file (daily notes, round discussion, investigations and management) Skill of performing bed side procedures and handling emergencies.

**3. Academic Activity:** Performance during presentation at Journal club/ Seminar/ Case discussion/Stat meeting and other academic sessions. Proficiency in skills as mentioned in job responsibilities.

## FINAL EXAMINATION

The summative assessment of competence will be done in the form of DNB Final Examination leading to the award of the degree of Diplomate of National Board in Dermatology and Venereology. The DNB final is a two-stage examination comprising the theory and practical part. An eligible candidate who has qualified the theory exam is permitted to appear in the practical examination.

### Theory Examination

1. The theory examination comprises of **Four** papers, maximum marks 100 each.
2. There are 10 short notes of 10 marks each, in each of the papers. The number of short notes and their respective marks weightage may vary in some subjects/some papers.
3. Maximum time permitted is 3 hours.
4. Candidate must score at least 50% in the aggregate of **Four** papers to qualify the theory examination.
5. Candidates who have qualified the theory examination are permitted to take up the practical examination.
6. The paper wise distribution of the Theory Examination shall be as follows:

**Paper I:**

Basic sciences, anatomy, physiology, biochemistry, pathology etc. in relation to the speciality

**Paper II:**

Principles of dermatology diagnosis and therapeutics

**Paper III:**

Venereology and Leprology, Principals of diagnosis and therapeutics

**Paper IV:**

Dermatology in internal medicine, including applied clinical aspects, therapeutics, pathology, immunopathology, bacteriology and recent advances.

**a) Practical Examination:**

1. Maximum Marks: 300.
2. Comprises of Clinical Examination and Viva.
3. Candidate must obtain a minimum of 50% marks in the Clinical Examination (including Viva) to qualify for the Practical Examination.
4. There are a maximum of three attempts that can be availed by a candidate for Practical Examination.
5. First attempt is the practical examination following immediately after the declaration of theory results.
6. Second and Third attempt in practical examination shall be permitted out of the next three sessions of practical examinations placed alongwith the next three successive theory examination sessions; after payment of full examination fees as may be prescribed by NBE.
7. Absentation from Practical Examination is counted as an attempt.
8. Appearance in first practical examination is compulsory;
9. Requests for Change in center of examination are not entertained, as the same is not permissible.
10. Candidates are required not to canvass with NBE for above.

**Declaration of DNB Final Results**

1. DNB final is a qualifying examination.
2. Results of DNB final examinations (theory & practical) are declared as PASS/FAIL.
3. DNB degree is awarded to a DNB trainee in the convocation of NBE.
